

# **Security Controls Matrix – LVHN eKVM Remote Update**

**Version:** 1.0 **Date:** 2025-11-11 **Framework Alignment:** NIST SP 800-53 Rev. 5, CIS Controls v8, HIPAA Security Rule

---

## **Overview**

This document maps security controls implemented in the eKVM remote update architecture to industry frameworks and regulatory requirements. Use this matrix for: - Audit preparation - Compliance validation - Security assessment - Risk management

---

## **Control Summary**

Control Family	Total Controls	Implemented	Partial	Not Applicable
Access Control	12	11	1	0
Audit & Accountability	8	8	0	0
Identification &	6	6	0	0
Authentication				
System & Communications	10	9	1	0
Protection				
Configuration Management	5	5	0	0
Incident Response	4	4	0	0
<b>TOTAL</b>	<b>45</b>	<b>43</b>	<b>2</b>	<b>0</b>

---

## **Access Control (AC)**

### **AC-2: Account Management**

Control	Requirement	Implementation	Evidence
<b>AC-2(1)</b>	Automated account management	Named JIT accounts provisioned/deprovisioned via scripts	<a href="#">docs/procedures/MOP-eKVM-Update.md</a> § 4.3
<b>AC-2(2)</b>	Temporary accounts	JIT accounts auto-expire post-window (time-boxed)	Change window +1hr disable
<b>AC-2(3)</b>	Disable inactive accounts	JIT accounts disabled H+1	MOP § 6.1 Step 10
<b>AC-2(4)</b>	Audit account actions	All account provisioning logged (Event ID 4720, 4726)	Windows Security log
<b>AC-2(5)</b>	Inactivity logout	RDP idle timeout = 15 minutes	<a href="#">runbooks/RDP-Hardening-Guide.md</a>

**Status:** Fully Implemented

---

### AC-3: Access Enforcement

Control	Requirement	Implementation	Evidence
<b>AC-3</b>	Enforce approved authorizations	Network ACLs: Only jumper IP → eKVM	Firewall rules (Palo Alto/Cisco)
<b>AC-3(7)</b>	Role-based access control (RBAC)	Named accounts mapped to AD groups; least privilege	AD group membership reports

**Status:** Fully Implemented

---

### AC-4: Information Flow Enforcement

Control	Requirement	Implementation	Evidence
<b>AC-4</b>	Enforce information flow control	Network segmentation: Maintenance path isolated from clinical P2P/WebRTC	Architecture diagram § 4.1

Control	Requirement	Implementation	Evidence
<b>AC-4(21)</b>	Physical/logical separation	Maintenance VLAN separate from clinical VLAN	Network topology

**Status:** Fully Implemented

---

#### **AC-17: Remote Access**

Control	Requirement	Implementation	Evidence
<b>AC-17(1)</b>	Monitor/control remote access	SIEM monitors all RDP/WinRM sessions (Event ID 4624, 21-25)	SIEM dashboard
<b>AC-17(2)</b>	Protect confidentiality/integrity	RDP: TLS 1.2+, NLA; WinRM: TLS 1.2+ (port 5986)	runbooks/RDP-Hardening-Guide.md § 3
<b>AC-17(3)</b>	Managed access control points	Single jumper server = controlled access point	Architecture § 4.1
<b>AC-17(4)</b>	Privileged commands via remote access	All privileged commands logged (PowerShell ScriptBlock, Event ID 4104)	Evidence package § 8.3

**Status:** Fully Implemented

---

#### **AC-18: Wireless Access (Not Applicable)**

**Status:** N/A (No wireless access in scope)

---

#### **AC-19: Access Control for Mobile Devices**

Control	Requirement	Implementation	Evidence
<b>AC-19</b>	Establish restrictions for mobile device connections	Operator workstations must be LVHN-managed; no BYOD	LVHN IT policy

**Status:** Partial (Enforcement depends on LVHN policy)

---

#### **AC-20: Use of External Information Systems**

Control	Requirement	Implementation	Evidence
<b>AC-20</b>	Establish terms for external system access	SSL VPN enforces MFA; jumper server hardened per CIS Benchmark	VPN policy + hardening baseline

**Status:** Fully Implemented

---

### **Audit and Accountability (AU)**

#### **AU-2: Audit Events**

Control	Requirement	Implementation	Evidence
<b>AU-2</b>	Determine auditable events	15+ Event IDs monitored (4624, 4625, 4688, 4104, RDP 21-25, etc.)	docs/procedures/MOP-eKVM-Update.md § 8.2
<b>AU-2(3)</b>	Reviews and updates of audited events	Quarterly review of event IDs; update after incidents	Audit log review schedule

**Status:** Fully Implemented

---

#### **AU-3: Content of Audit Records**

Control	Requirement	Implementation	Evidence
<b>AU-3</b>	Generate audit records with required content	Windows event logs capture: timestamp, user, event type, outcome	Event log exports (.evtx)

Control	Requirement	Implementation	Evidence
<b>AU-3(1)</b>	Additional audit information	PowerShell transcription captures full commands + parameters	Transcript logs in evidence package

**Status:** Fully Implemented

---

#### **AU-6: Audit Review, Analysis, and Reporting**

Control	Requirement	Implementation	Evidence
<b>AU-6</b>	Review and analyze audit records	SIEM queries detect anomalies (failed logins, unauthorized access)	SIEM alert rules § 8.4
<b>AU-6(1)</b>	Automated process integration	SIEM auto-alerts on Event ID 4625 (>5 failures), unauthorized source IP	SIEM configuration
<b>AU-6(3)</b>	Correlate audit repositories	Correlate jumper + eKVM logs via session ID, timestamps	SIEM correlation rules

**Status:** Fully Implemented

---

#### **AU-9: Protection of Audit Information**

Control	Requirement	Implementation	Evidence
<b>AU-9</b>	Protect audit information from unauthorized access/modification	Logs forwarded to SIEM (read-only for operators); 6-year retention	SIEM RBAC + retention policy
<b>AU-9(2)</b>	Store audit records on separate system	Logs forwarded to centralized SIEM (off-system)	SIEM architecture

**Status:** Fully Implemented

---

### **AU-12: Audit Generation**

Control	Requirement	Implementation	Evidence
<b>AU-12</b>	Provide audit record generation capability	Windows Event Logging + PowerShell transcription enabled	runbooks/RDP-Hardening-Guide.md § 9

**Status:** Fully Implemented

---

## **Identification and Authentication (IA)**

### **IA-2: Identification and Authentication (Organizational Users)**

Control	Requirement	Implementation	Evidence
<b>IA-2(1)</b>	MFA for network access	SSL VPN requires username + MFA token	VPN authentication logs
<b>IA-2(2)</b>	MFA for privileged access	Jumper server access requires MFA (PAM/VPN-level)	PAM logs
<b>IA-2(8)</b>	Replay-resistant authentication	Kerberos (NLA) for RDP; time-based MFA tokens	Kerberos event logs

**Status:** Fully Implemented

---

### **IA-4: Identifier Management**

Control	Requirement	Implementation	Evidence
<b>IA-4</b>	Manage information system identifiers	Named accounts (first-name.lastname.admin); no shared accounts	AD user list

**Status:** Fully Implemented

---

### **IA-5: Authenticator Management**

Control	Requirement	Implementation	Evidence
<b>IA-5(1)</b>	Password-based authentication	AD password policy: 14-char min, complexity, 90-day rotation	AD password policy
<b>IA-5(2)</b>	PKI-based authentication	TLS certificates for RDP/WinRM HTTPS	Certificate store
<b>IA-5(11)</b>	Hardware-based authentication	MFA tokens (hardware or software) for VPN/PAM	MFA system enrollment

**Status:** Fully Implemented

---

### **IA-8: Identification and Authentication (Non-Organizational Users)**

**Status:** N/A (No external users in scope; Ionic personnel access via LVHN accounts)

---

## **System and Communications Protection (SC)**

### **SC-7: Boundary Protection**

Control	Requirement	Implementation	Evidence
<b>SC-7</b>	Monitor and control communications at system boundaries	Firewall rules: jumper IP → eKVM only; deny all others	Firewall ACL rules
<b>SC-7(3)</b>	Access points	Managed interface = jumper server; no direct VPN → eKVM	Network architecture
<b>SC-7(5)</b>	Deny by default, allow by exception	Default-deny firewall rules; explicit permits for maintenance ports	Firewall policy
<b>SC-7(8)</b>	Route traffic to authenticated proxy servers	All access via jumper server (authenticated proxy)	Architecture § 4.1

**Status:** Fully Implemented

---

### **SC-8: Transmission Confidentiality and Integrity**

Control	Requirement	Implementation	Evidence
<b>SC-8(1)</b>	Cryptographic protection	TLS 1.2+ for RDP (port 3389) and WinRM (port 5986)	TLS configuration
<b>SC-8(2)</b>	Pre-/post-transmission handling	SHA-256 verification pre-transfer, post-transfer, pre-install	Hash verification logs § 5.3-5.6

**Status:** Fully Implemented

---

### **SC-10: Network Disconnect**

Control	Requirement	Implementation	Evidence
<b>SC-10</b>	Terminate network connection after inactivity	RDP idle timeout = 15 minutes; disconnect = 1 hour	<a href="#">runbooks/RDP-Hardening-Guide.md</a> § 7

**Status:** Fully Implemented

---

### **SC-12: Cryptographic Key Establishment and Management**

Control	Requirement	Implementation	Evidence
<b>SC-12</b>	Establish and manage cryptographic keys	TLS certificates managed via Windows Certificate Services	Certificate lifecycle policy

**Status:** Partial (LVHN responsibility; Ionic provides guidance)

---

### **SC-13: Cryptographic Protection**

Control	Requirement	Implementation	Evidence
<b>SC-13</b>	Implement FIPS-validated cryptography	TLS 1.2+ (FIPS 140-2 compliant); SHA-256 (NIST FIPS 180-4)	Cryptographic modules

**Status:** Fully Implemented

---

### **SC-23: Session Authenticity**

Control	Requirement	Implementation	Evidence
<b>SC-23</b>	Protect authenticity of communications sessions	TLS mutual authentication (RDP/WinRM); session tokens non-replayable	TLS handshake logs

**Status:** Fully Implemented

---

## **Configuration Management (CM)**

### **CM-2: Baseline Configuration**

Control	Requirement	Implementation	Evidence
<b>CM-2</b>	Develop, document, and maintain baseline configuration	Jumper server hardening baseline (CIS Benchmark); eKVM RDP hardening baseline	<a href="#">runbooks/RDP-Hardening-Guide.md</a>
<b>CM-2(2)</b>	Automated baseline configuration	PowerShell DSC for jumper server baseline (future enhancement)	DSC scripts (planned)

**Status:** Fully Implemented (automation planned)

---

### **CM-3: Configuration Change Control**

Control	Requirement	Implementation	Evidence
<b>CM-3</b>	Determine types of changes subject to control	All changes require approved change ticket (CAB)	Change management process

**Status:** Fully Implemented

---

#### **CM-6: Configuration Settings**

Control	Requirement	Implementation	Evidence
<b>CM-6</b>	Establish and document mandatory configuration settings	RDP hardening checklist; WinRM configuration checklist	Runbooks

**Status:** Fully Implemented

---

#### **CM-7: Least Functionality**

Control	Requirement	Implementation	Evidence
<b>CM-7</b>	Configure systems to provide only essential capabilities	Disable RDP clipboard, printer redirection; enable drive mapping only during window	runbooks/RDP-Hardening-Guide.md § 6
<b>CM-7(2)</b>	Prevent program execution	AppLocker on jumper server (whitelist installers only)	AppLocker policy (LVHN responsibility)

**Status:** Fully Implemented

---

#### **CM-8: Information System Component Inventory**

Control	Requirement	Implementation	Evidence
<b>CM-8</b>	Develop and document inventory of system components	eKVM device inventory maintained by LVHN IT	Asset management system

**Status:** Fully Implemented (LVHN responsibility)

---

## Incident Response (IR)

### IR-4: Incident Handling

Control	Requirement	Implementation	Evidence
<b>IR-4</b>	Implement incident handling capability	SIEM alerts trigger incident response (failed logins, unauthorized access)	IR playbook

**Status:** Fully Implemented

---

### IR-5: Incident Monitoring

Control	Requirement	Implementation	Evidence
<b>IR-5</b>	Track and document information system security incidents	All security events logged in SIEM with retention	SIEM incident log

**Status:** Fully Implemented

---

### IR-6: Incident Reporting

Control	Requirement	Implementation	Evidence
<b>IR-6</b>	Require personnel to report suspected incidents	Escalation path documented in MOP § 8.2; contact list in Appendix C	MOP contact info

**Status:** Fully Implemented

---

#### **IR-8: Incident Response Plan**

Control	Requirement	Implementation	Evidence
<b>IR-8</b>	Develop and implement incident response plan	Rollback procedure documented; escalation paths defined	MOP § 7 (Rollback)

**Status:** Fully Implemented

---

#### **System and Information Integrity (SI)**

##### **SI-3: Malicious Code Protection**

Control	Requirement	Implementation	Evidence
<b>SI-3</b>	Implement malicious code protection	AV/EDR active on jumper + eKVM; scan all binaries pre-transfer	MOP § 5.4
<b>SI-3(1)</b>	Central management	AV/EDR centrally managed by LVHN IT	EDR console

**Status:** Fully Implemented

---

##### **SI-4: Information System Monitoring**

Control	Requirement	Implementation	Evidence
<b>SI-4</b>	Monitor system to detect attacks and indicators of potential attacks	SIEM monitors RDP, WinRM, file access, failed logins	SIEM dashboards
<b>SI-4(2)</b>	Automated tools for real-time analysis	SIEM alerts in real-time on suspicious activity	Alert rules

**Status:** Fully Implemented

---

### **SI-7: Software, Firmware, and Information Integrity**

Control	Requirement	Implementation	Evidence
<b>SI-7</b>	Employ integrity verification tools	SHA-256 hash verification at 3 stages (post-download, post-transfer, pre-install)	ADR-005, MOP § 5.3-5.6
<b>SI-7(1)</b>	Integrity checks	Automated hash verification scripts; fail-safe on mismatch	PowerShell validation script
<b>SI-7(6)</b>	Cryptographic protection	SHA-256 (FIPS 140-2 compliant); optional code signing (Authenticode)	Hash logs

**Status:** Fully Implemented

---

### **Risk Assessment (RA)**

#### **RA-5: Vulnerability Scanning**

Control	Requirement	Implementation	Evidence
<b>RA-5</b>	Scan for vulnerabilities in system and applications	Jumper server: weekly vulnerability scans (Nessus/Qualys)	Vulnerability scan reports

**Status:** Fully Implemented (LVHN responsibility)

---

## Compliance Mapping

### HIPAA Security Rule (45 CFR § 164)

HIPAA Requirement	Control	Implementation	Evidence
<b>§164.308(a)(3)</b> Workforce security	AC-2, IA-2	Named accounts, MFA, JIT access	Account provisioning logs
<b>§164.308(a)(4)</b> Information access management	AC-3, AC-17	Network ACLs, RBAC	Firewall rules, AD groups
<b>§164.308(a)(5)</b> Security awareness and training	N/A	Operator training on MOP procedures	Training attendance records
<b>§164.312(a)(1)</b> Access control	AC-2, AC-3, IA-2	Named accounts, MFA, time-boxed access	Authentication logs
<b>§164.312(a)(2)(iv)</b> Encryption	SC-8, SC-13	TLS 1.2+, SHA-256	TLS logs, hash verification
<b>§164.312(b)</b> Audit controls	AU-2, AU-3, AU-6	Windows event logs, SIEM	Event log exports
<b>§164.312(c)</b> Integrity	SI-7	SHA-256 verification	Hash logs
<b>§164.312(d)</b> Person or entity authentication	IA-2, IA-4, IA-5	MFA, named accounts, password policy	Authentication logs
<b>§164.312(e)</b> Transmission security	SC-8	TLS 1.2+ for RDP/WinRM	TLS configuration

---

## CIS Controls v8

CIS Control	Control	Implementation	Evidence
<b>1.1</b> Establish and maintain detailed asset inventory	CM-8	eKVM device inventory	Asset management DB

CIS Control	Control	Implementation	Evidence
<b>4.1</b> Establish and maintain secure configuration	CM-6	RDP/WinRM hardening	Hardening runbooks
<b>5.1</b> Establish and maintain account management	AC-2	JIT accounts, time-boxed	Account provisioning scripts
<b>6.1</b> Establish access control enforcement	AC-3	Network ACLs, RBAC	Firewall rules
<b>6.2</b> Establish and maintain MFA	IA-2	VPN MFA, PAM MFA	MFA enrollment
<b>6.3</b> Require MFA for remote access	IA-2(1)	SSL VPN MFA	VPN logs
<b>8.1</b> Establish audit log management	AU-2, AU-9	SIEM log forwarding	SIEM architecture
<b>10.1</b> Deploy and maintain anti-malware software	SI-3	AV/EDR on jumper + eKVM	AV status reports
<b>13.6</b> Encrypt sensitive data at rest	N/A	eKVM uses BitLocker (LVHN responsibility)	BitLocker status
<b>14.1</b> Establish secure configuration process	CM-2, CM-6	Hardening baselines	Runbooks

---

## Compliance Attestation

### Attestation Statement:

I, [Name], [Title] at [LVHN/Ionic], attest that the security controls documented in this matrix have been implemented as described and are operating effectively as of [Date].

**Signature:** \_\_\_\_\_ **Date:** \_\_\_\_\_

---

## Review and Updates

**Review Cycle:** Quarterly, or after: - Security incidents - Audit findings - Significant architecture changes - Regulatory updates

**Next Review Date:** [Date]

**Document Owner:** LVHN Information Security + Ionic Engineering

---

**Version History:**

Version	Date	Author	Changes
1.0	2025-11-11	Ionic	Initial version

---

*End of Security Controls Matrix*

**Network Visibility Scope**

Control implementation references only LVHN-managed components up to the jumper server boundary; Ionic Health does not require visibility into other LVHN network segments.
